Claude + Humans vs nginx: CVE-2026-27654

Heap buffer overflow in `ngx_http_dav_copy_move_handler()` driven by an unsigned underflow in `ngx_http_map_uri_to_path()`. Crash from Claude, exploits from human/Claude collaboration.

File	What
<code>blog.md</code>	Blog post (written by humans)
<code>poc-1/</code>	Write-path PoC: arbitrary file write via PUT + COPY
<code>poc-2/</code>	Read-path PoC: copy attacker-chosen source file into a fetchable location

A note on the artifacts

The write-ups and PoCs in this series are AI-generated and human-verified. We keep human editing to a minimum so the artifacts document the current state of the art, which means we don't edit out hallucinations or slop. We do verify that the PoCs work. The blog posts are written by humans.
